Art Unit: 1761

Applicants' amendments to the claims are sufficient to overcome the rejection of the claims over Combes in view of Dew and Turbak in view of Combes and Dew. Also the objection and rejection of the claims has been withdrawn in response to applicants' amendments to the claims.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 13-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dihora (6,608,017) in view of Turbak (4,378,381) and further in view of Dew (5,906,843).

Dihora discloses encapsulated oil particles. The oil particles are made by dispersing oil in hydrophobic fumed silica with gentle agitation.

Then the oil/silica mixture is added to a vortex of starch and ultrasonically mixed. After drying the product is atomized to form a spray dried encapsulate oil (example 1). The claims appear to differ from Dihora in the recitation of the inclusion of microcrystalline cellulose in the emulsion.

Turbak teaches that a combination of microfibrillated cellulose and soybean oil form emulsions that are stable for extended periods of time. It would

Page 3

have been obvious to one of ordinary skill in the art to add the microfibrillated cellulose of Turbak to the oil of Dihora in order to stabilize the starting oil composition. The claims also appear to differ from Dihora in the mixing order used in the process. It is appreciated that the mixing order of the process is different from that of the claims but the final product in both situations remains an encapsulated oil particle. The claims also appear to differ in the utilization of precipitated silica. Dew teaches the use of precipitated silica in the conversion of organic liquids to dry free flowing particles. At column 7, lines 20-21, vegetable oil is described as an organic liquid. So each of Dew and Dihora disclose that silica products are useful in preparing powdered oils. It would have been obvious to one of ordinary skill in the art to use the precipitated silica of Dew in place of the fumed silica of Dihora in order to prepare a powdered oiled product.

Claims 13-32 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear in claim 13 as to what finally results for the process steps in the claims. An amendment to the claim adding –to form an encapsulated oil particle- at the end of the claim would overcome the rejection.

Claim 29 includes dispersing steps of both 30 and 60 seconds in three different steps of the claim and it is unclear if these are separate time frames or a part of the same time frame. An amendment to the claims clarifying this issue would overcome the rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carolyn A Paden whose telephone number is (571) 272-1403. The examiner can normally be reached on Monday to Friday from 7 am to 3:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Keith Hendricks, can be reached on (571) 272-1401 or by dialing 571-272-1700. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
